

# functions

we use @function to create a function

and @return to return a value

The screenshot shows a code editor with a dark theme. The Explorer panel on the left shows a project structure with files like index.html, main.scss, \_resets.scss, \_variables.scss, and main.css. The main editor window displays the following SCSS code:

```
1 @import './resets';
2 @import './variables';
3
4 @function weight($weight-name) {
5   @return map-get($font-weights, $weight-name);
6 }
7
8 body {
9   background: $primary-color;
10  color: $text-color;
11 }
12
13 .main {
14   width: 80%;
15   margin: 0 auto;
16
17   #{&}__paragraph {
18     font-weight: weight(regular);
19   }
```
