

# Operators of Linq

## LINQ Operators

---

- ✓ Operators are set of methods which are used in LINQ to write a query.
- ✓ These methods offers lots of feature which can be applied on data.

For example –

- ✓ Filtering data (Filter the data)
- ✓ Sorting (Order of data)
- ✓ Etc...

## Projection

---

Projection is used to select data from a data source and creating a new form of data.

We can select the original data in its original state also in other form by applying some operations on it.

# Projection Methods

---

There are two methods in Projection –

- Select
- SelectMany
