Difference between the interface and the type

both are work same mostly

You cant use the union and the intersection in the interface but you can use it in the object

```
type eid1 = number | string

interface userType1 {
    id: number,
    name: string
}

let User1: userType = {
    id: 1,
    name: 'Iyyappan'
}
```

you can make a property optional in the interface

```typescript
   interface userType1 {
       id: number,
       name: string,
       age?: number
   }

   let User1: userType1 = {
       id: 1,
       name: 'Iyyappan'
   }
```

Readonly

```typescript
interface userType1 {
    readonly id: number,
    name: string,
    age?: number
}

let User1: userType1 = {
    id: 1,
    name: 'Iyyappan'
}

User1.id = 5
```
